

# OS X 10.11 “El Capitan” Quickstart Guide

## Objective

Upgrade a TE Connectivity Standardized Mac to OS X 10.11 “El Capitan”.

**Note: TEMPO 1.0 is designed to upgrade an already standardized Mac, and should not be used for new Mac setup.**

## Requirements

- Intel based Mac running OS X 10.9 “Mavericks” or OS X 10.10 “Yosemite”
- Centrify installed and operational
- Local account with administrator rights
- **Wired connection** to TE Connectivity corporate network

## Instructions

1. Verify minimum requirements
  - a. Be sure that you are connected to the TE network and can browse internal sites.
  - b. Be sure that you know the credentials for a *local* admin user (just in case).
  - c. Have a known-good backup (just in case).
2. Install TEMPO
  - a. Download TEMPO from the Apple Repository.
    - i. <http://applerepository.tycoelectronics.com/Upgrade-to-ElCapitan/>
  - b. Launch the installer from your downloads folder.
    - i. Your security settings may generate an error when doing this, if so, you may need to launch the installer by secondary-clicking and selecting “Open” from the contextual menu.
  - c. TEMPO will upgrade existing installations of Centrify, McAfee, and AnyConnect
    - i. You shouldn’t need to install any other software to use El Capitan.
  - d. Provide your credentials when prompted, and again on the confirmation screens. These credentials will be used to create your account later.
  - e. Enter your building number, then select your region from the list. They are used to set your computer’s name and determine which server you connect to.
  - f. After the installation completes, which can take up to 10 minutes, reboot.
3. Install El Capitan
  - a. Download El Capitan from the Mac App Store, and launch the installer.
  - b. The installer will display a short progress bar, then reboot to continue the installation.
  - c. As the installation completes, you may be prompted to login again.

## Optional

You may want to update your other software to ensure compatibility with El Capitan

- Apple Software Update in the Mac App Store in order to update any Apple applications.
- Microsoft Auto Updater can be accessed through the Help menu in any Office Application
